DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group V in Paper No. 12 is acknowledged.

Specification

2. The disclosure is objected to because of the following informalities: "16" should be --14-- on line 6 of the amendment to the paragraph beginning at line 22 of page 21 filed on 13 August 2001.

Appropriate correction is required.

Drawings

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: '40'. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3724

5. Claims 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keim (US 4,430,914) in view of Nordlof (US 5,761,978).

Keim discloses the invention substantially as claimed except for a knock lever mechanism having a knock lever arm and a kinematic linkage having a center pivot. Instead, Keim employs a pneumatic cylinder controlled by a controller. However, Nordlof discloses a knock lever mechanism having a lever arm (71) and a kinematic linkage (85) having a center pivot (86) wherein the lever arm is carried at one end of the kinematic linkage (via 83 and 84) and a drive wheel (23 on 25) is carried at an opposite end of the kinematic linkage (via 87 and 85a). It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a knock lever mechanism as taught by Nordlof on the device of Keim as an alternative structure for providing the stepwise advancing of the workpiece.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kenworthy et al., Perlman, Gotz, and Bareis et al. are cited to show related devices.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Choi whose telephone number is 703-306-4523.
